

# OARBIC Consulting

The right people, in the right place,  
at the right time.

**Who we are.** OARBIC is a “boutique” consulting and software company that was incorporated in 2000 and specializes in the Property & Casualty insurance industry.

Our business model is not one of a “body shop” placement agency but is a consultancy that contracts to deliver specific pieces of work, sub-projects or projects or provide very senior skills to supplement in-house teams or provide specific expertise that may not be required in-house on a full time basis.

Our work includes both legacy systems and more modern Java, .NET and Services Oriented type systems and covers the whole range of disciplines from Policy Management, Billing, Claims, Accounting, or complex table driven system set up.

Our consultants are equally at home with Canadian or American insurance products, rules and regulations.

**What we do.** We bring to the table senior, highly experienced technical, architectural, analytical or project / program management skills.

Our company structure allows us to be completely flexible and to do business the way you want to do business. We will work on a time and materials basis or, with sufficient project control, on a fixed cost basis.

OARBIC technical consultants have extensive experience in the majority of enterprise wide Property and Casualty Administrative Systems. Our strong portfolio of skills allows us to represent every stage of the project lifecycle as needed. This includes business case development, needs analysis, creating appropriate architectures, the actual development of the solution and, of course, testing.

Many of our consultants are equally at home with both legacy systems or the more modern Services type of architecture, Java and web based designs.

One of our specialties is integrating such modern technology with the legacy technologies.

Our full and complete understanding of the requirements and behavior of the legacy systems allows us to better integrate modern technologies to the legacy systems, ensuring continued and enhanced value not only from your current investments but also from your past investments.

OARBIC manages projects of all sizes and although we agree that a project manager doesn't necessarily need in-depth industry experience, we find the industry experience our project managers have provides an edge that often can make the critical difference.

**How we do it.** OARBIC's business model is one of flexibility designed to meet Client demands. In addition to our employees, we have a base of over 100 pre-screened, pre-qualified consultants who have all agreed to work with OARBIC as projects arise and have all agreed to respect OARBIC's primary goals of professionalism, providing business value and client satisfaction.

Our business model allows us to bring together, very quickly, exactly the correct mix of skills and experience to deliver the technical solutions that drive value for your business. Each Consultant is known by or recommended personally to at least one of the senior managers at OARBIC, allowing OARBIC to have first hand knowledge of the quality, history and abilities of each Consultant.

Our consultants will travel to your site, temporarily relocate to your site or work from our offices. One of our first tasks is to work with you to structure a work location schedule that provides you with the skills you need in the right place at the right time. Our goal is to meet your needs while understanding that expense control is critical.

OARBIC's goal is to build relationships with our clients. Our skills and knowledge are brought forward to fulfill your requirements with the objective of realizing a confidence in quality, timeliness and efficiency – fulfilling a faster return on your investment.
